

SiSense Training

Sisense is an Application Programming Interface (API) which is the first cloud technology that builds it easy to jumble data and creates analytic apps which is ready to implant anywhere. Sisense is a self-service problem-solving and reporting tool that lets anyone build interactive control-panel & reports in just a few minutes.

Sisense is a supple business intelligence (BI) solution that allows advanced tools to control and support business data with problem-solving, visuals and reporting. The solution permits businesses to inspect big and disparate datasets and generate relevant business trends for them.

Sisense is the principal business intelligence (BI) software that provides ample of benefits to its users. You can use it to gather information from all your sources and merge them into a single repository. Sisense Cloud permits you to station a complete cloud-based business intelligence platform that's owned totally by the business units that need it, in a supple and cost-effective way.

Although Sisense is a commercial product with a price tag on software but its total cost is still lesser than compared to any other open-source solutions with the same width of functionality, if you include software, hardware and services.
