

BlockChain Security

Table of content:

Introduction

- Money, Legal Tender and Bitcoin
- Bitcoin and Silk Road
- Blockchain
- Address
- Timestamp
- Ledger and Distributed Ledger
- Proof of Work PoW Proof of Stake PoS Practical Byzantine Fault Tolerance PBFT
- Bitcoin Blockchain series of attack
- Cryptography
- Cryptography A Story of Corporate Lover
- Symmetric and asymmetric cryptography
- Hash Function
- Hash Function Demo
- Hash Function Properties
- PoW Email Example
- Digital Signature
- Genesis Block merkle tree
- Mining
- Blockchain Security Topics Overview

Blockchain Security

- Access Control
- Blockchain Node Interaction
- Hardening of Server SSH
- Firewall and Server Security I
- Network Security
- Permission Management
- Regulating Blockchain Parameters
- Target Time Interval TTI
- Mining Difficulty
- Mining Diversity
- Blockchain Parameters
- Secure Backup of Keys
- Consensus Mechanism
- Contingency Plan Policy Testing and Backup
- Auditing and Vulnerability Scanning
- IRP Incident Response Plan

Blockchain Attacks

- Blockchain Attacks Types

Smart Contract Security

- Smart Contract Introduction and Features
- Security Vulnerabilities Blockchain
- Security Vulnerabilities Immutable Bugs Ether Lost in Transfer
- Security Vulnerabilities Stack Size Limit
- Security Vulnerabilities Call to Unknown
- Security Vulnerabilities Type Caste
- Smart Contract Errors and Vulnerability Demo

ICO Security

- ICO Introduction and Brief History
- ICO Security I
- Awesome BONUS / Resource exclusively for you
